

Eugene Draitsev

Senior Full-Stack / Platform Engineer

Stockholm, Sweden | ddrrai@gmail.com | eugene-draitsev.vercel.app | github.com/EugeneDraitsev | linkedin.com/in/eugenedraitsev

SUMMARY

Senior full-stack engineer with ~15 years of shipping production web systems, most often in the awkward middle between a promising idea and a system people can trust. At Yubico I lead authentication for the e-commerce store (passkeys/WebAuthn) on a platform used in 110+ countries, and shipped Yubico's side of the OpenAI partnership. Before that I built the storefront and local payments for Daniel Wellington's global e-commerce, Black Friday peaks included. On the side I run an LLM agent platform on AWS that handles millions of messages a month.

CORE EXPERTISE

FRONTEND

TypeScript, SvelteKit, React, Next.js, Gatsby, Three.js/WebGL, web performance

CLOUD AND PLATFORM

AWS (Lambda, SQS, DynamoDB, S3), GCP, Kubernetes, Docker, Serverless Framework

E-COMMERCE AND PAYMENTS

Checkout, local payment methods, shipping and tax integrations, Magento, Commercetools

BACKEND

Node.js, Java, Rust, GraphQL, REST, serverless, PostgreSQL, DynamoDB, Redis

IDENTITY AND SECURITY

Passkeys/WebAuthn, authentication and authorization flows, account recovery

AI SYSTEMS

LLM agents, tool calling, multi-model routing and fallbacks, OpenAI and Gemini APIs

PROFESSIONAL EXPERIENCE

Yubico · Stockholm, Sweden

October 2022 – Present

Senior Frontend Engineer · full-stack / platform scope

Customer accounts and e-commerce for consumers, partners, and businesses in 110+ countries; tens of thousands of monthly users.

- Lead authentication for the e-commerce store: built its auth service and all customer-facing auth flows (passkeys/WebAuthn sign-in, account recovery, cross-service authorization), and led the integration with Yubico's unified auth service.
- Shipped Yubico's side of the OpenAI Advanced Account Security partnership, including the partner integration behind the public [OpenAI + Yubico YubiKey bundle](#).
- Migrated the accounts and e-commerce frontends from React to SvelteKit: mobile Lighthouse performance went from **30–40 to 70+**, bundles got smaller, and production rollouts became faster and safer.
- Own work end to end, from scoping with product and partner teams to rollout and monitoring, with **near-zero production incidents**.

Tech: TypeScript, SvelteKit, React, Node.js, Magento, WebAuthn/passkeys, GCP, Kubernetes, Docker, Strapi, Vitest, Jest, Cypress

Daniel Wellington · Stockholm, Sweden

June 2020 – October 2022

Senior Full-Stack Engineer

Global direct-to-consumer e-commerce across Europe, North America, and Asia: storefront, checkout, and backend services for payments, taxes, shipping, and content.

- Designed and shipped the storefront on React, Gatsby, and TypeScript: mobile Lighthouse performance went from **~30 to 70+**, and the site held up under Black Friday peak traffic.
- Personally integrated local payment methods for regional launches, such as KakaoPay in South Korea and Adyen-based methods in India, plus carriers like Yamato Transport in Japan, working directly with payment and shipping providers.
- Built serverless backend services for payments, taxes, shipping, content, and market-specific business logic.
- Mentored **3 engineers** on the e-commerce team.

Tech: TypeScript, React, Gatsby, Node.js, AWS, Serverless, GraphQL, Commercetools, Contentful, Adyen, Jest, Cypress

Senior Software Developer

Web, analytics, ML tooling, and mobile products for telecom and enterprise customers.

- Designed the React Native architecture and native Java/Swift modules for a device-care app used by **5+ mobile operators** in Sweden, Japan, Russia, and other markets.
- Built Falcon, an internal web app the data science team used to compare ML models and training jobs (React, D3, GraphQL).

Tech: JavaScript, React, React Native, GraphQL, D3, Node.js, AWS, Java, Swift, Jest

Senior Software Developer

Consulting delivery for education, retail, and enterprise content clients.

- Designed the frontend architecture and built Node.js services for Minnesota Reading Corps' education programs.
- Delivered commerce and enterprise content systems for clients such as Lands' End Business Outfitters, working directly with client teams on requirements and trade-offs.

Tech: JavaScript, AngularJS, React, Node.js, Java, Spring, REST, AWS, D3, Alfresco, Hybris

Software Developer

Java/Spring web development for a multi-channel financial services platform, and production support for Oracle ATG commerce portals.

SELECTED PROJECTS**Telegram AI Agent Bot**

Open source · 2015 – Present

LLM-powered agent bot running in *hundreds of Telegram chats*, handling *several million messages a month* at *near-100% uptime*.

- Event-driven serverless architecture on AWS: fast webhook ingress, per-chat FIFO SQS queues (ordered within a chat, parallel across chats), dedicated Lambda workers with dead-letter queues, and Redis leases so redelivered messages never produce duplicate replies.
- Agent with multi-model routing and fallbacks across OpenAI and Gemini models, tool calling, reply gating, chat-history context, and image, video, and voice generation.
- Live statistics over WebSockets and an owner admin dashboard secured with Telegram OIDC.

Tech: TypeScript, Bun, AWS Lambda, SQS, DynamoDB, S3, Upstash Redis, Serverless Framework, grammY, ffmpeg, OpenAI API, Gemini API

MowFleet Control Center

Contract · 2023 – Present

Built from scratch and maintain a production B2B dashboard and serverless backend that turns autonomous Husqvarna mower telemetry into zone coverage, utilization, error tracking, and PDF reports.

Tech: Next.js, React, Tailwind, AWS Lambda, API Gateway, DynamoDB, S3, Husqvarna Fleet APIs, Google Maps

Orb Knight

Gamedev.js Jam · 2026

3D browser roguelite built with AI coding agents: **12th overall** and **6th in Gameplay** out of **495 entries**. I owned architecture, review, and game feel; agents handled scoped implementation passes.

Tech: SvelteKit, Svelte 5, Three.js (Threlte), Rapier physics, Bun, Claude Code, Codex

EDUCATION

Specialist Degree in Systems Engineering, Faculty of Computer Systems and Networks

LANGUAGES AND WORK AUTHORIZATION

Languages: Russian (native), Belarusian (native), English (C1) | **Work authorization:** Swedish citizen
