

Eugene Draitsev

Senior Full-Stack / Platform Engineer

Stockholm, Sweden | ddrrai@gmail.com | eugene-draitsev.vercel.app | github.com/EugeneDraitsev | linkedin.com/in/eugenedraitsev

PROFESSIONAL SUMMARY

Senior full-stack and platform engineer with 14+ years of experience delivering production systems across frontend, backend, cloud infrastructure, e-commerce, and identity/security. Strongest in ambiguous customer-facing work: discovery, technical scoping, implementation, rollout, and production follow-through. Currently building Yubico Customer Accounts / ECOM, including passkeys/WebAuthn, cross-service authorization, partner integrations, and Kubernetes-based delivery. Outside work, I build and operate LLM-powered agent systems on AWS.

CORE EXPERTISE

CUSTOMER AND PRODUCT DELIVERY Discovery, technical workshops, partner integrations, scoping, prototypes, rollout, production support	FULL-STACK ENGINEERING TypeScript, JavaScript, SvelteKit, React, Node.js, Java, GraphQL, REST
CLOUD AND PLATFORM AWS, GCP, Kubernetes, Docker, Serverless, DynamoDB, PostgreSQL, Redis	SECURITY AND AI SYSTEMS WebAuthn/passkeys, authentication and authorization, LLM tool use, model routing, observability, behavior analysis

SELECTED RECENT DELIVERY

- Supported the Yubico-side launch of the public [OpenAI Advanced Account Security / YubiKey bundle](#) in spring 2026: partner integration, custom product page, checkout flow, and authorization handoff.
- Work directly with Yubico auth and security teams on an organization-wide FIDO2 authorization flow for future products, from planning and service details through integration across multiple teams.
- Delivered third-party commerce work across Yubico and Daniel Wellington: local payment methods, regional store launches, campaign support, and Black Friday readiness.

SELECTED AI / DEPLOYMENT PROJECT

Telegram Agentic Bot	Personal project 2015 - Present
-----------------------------	--

- Long-running Telegram system that has evolved into an LLM-powered agent platform. Built in TypeScript on AWS with fast webhook ingress and asynchronous workers for model execution, tool calls, chat activity, persistence, live statistics, and scheduled jobs.
- Designed the serverless architecture across ingress, agent, activity, WebSocket, search, rendering, and scheduler services.
 - Implemented multi-model routing, reply gating, tool execution, context and history management, image and multimodal commands, metrics, and failure logging.
 - Use real chat feedback, failure logs, and operational telemetry to compare model/tool behavior and iterate on prompts, routing, context handling, and fallbacks.

Tech: TypeScript, Bun, AWS Lambda, Serverless Framework, DynamoDB, S3, Upstash Redis, grammY, OpenAI API, Gemini API

PROFESSIONAL EXPERIENCE

Yubico - Stockholm, Sweden

October 2022 - Present

Senior Frontend Engineer | *full-stack / platform scope*

Customer Accounts and e-commerce platform serving consumers, partners, and small businesses.

- Build and migrate customer-facing accounts and e-commerce surfaces from React to SvelteKit, integrating TypeScript services, Magento, auth services, and Kubernetes delivery while keeping critical flows stable.
- Design passkey/WebAuthn, authentication, recovery, and authorization flows across customer and business account scenarios, working with auth, security, backend, and e-commerce teams.
- Worked on the Yubico-side launch of the public [OpenAI + Yubico YubiKey bundle](#), covering partner integration, product-page work, checkout flow, and authorization handoff.
- Own ambiguous production work end to end across discovery, technical scoping, implementation, integration debugging, rollout, monitoring, and post-launch support.

Tech: TypeScript, SvelteKit, React, Node.js, Magento, WebAuthn/passkeys, GCP, Kubernetes, Docker, Strapi, Vitest, Jest, Cypress

Daniel Wellington - Stockholm, Sweden

June 2020 - October 2022

Senior Full-Stack Engineer

Global e-commerce website, checkout, and backend services around payments, taxes, shipping, content, and market-specific business logic.

- Designed and shipped customer-facing architecture with React, Gatsby, and TypeScript, with a strong focus on page speed, conversion flows, and production reliability.
- Built serverless backend services and third-party integrations for local payments, taxes, shipping, content, store launches, campaigns, and locale-specific workflows.
- Worked across product, design, backend, and external providers to turn business requirements, provider constraints, and launch deadlines into stable production releases.

Tech: TypeScript, React, Gatsby, Node.js, AWS, Serverless, GraphQL, Commercetools, Contentful, Jest, Cypress

PROFESSIONAL EXPERIENCE - CONTINUED

eBuilder - Stockholm, Sweden

August 2016 - June 2020

Senior Software Developer

Full-stack web, analytics, ML workflow, and mobile products for telecom and enterprise customers.

- Built Falcon, a web application for comparing ML models and training jobs using collected metrics; developed React/D3 interfaces and GraphQL services for model, job, and output evaluation workflows.
- Built device analytics and predictive interfaces over large operational datasets, translating collected data into interactive dashboards and decision support.
- Designed React Native architecture and native Java and Swift modules for device-care applications used by mobile operators across Sweden, Japan, Russia, and other markets.

Tech: JavaScript, React, React Native, GraphQL, D3, Node.js, AWS, Java, Swift, Jest

Senior Software Developer

Consulting delivery across education, retail, enterprise content, analytics, and mobile web products.

- Designed frontend architecture and built Node.js services for Minnesota ReadingCorps, translating program requirements into production workflows for education teams.
- Delivered configurable commerce and enterprise content systems for clients including Lands' End Business Outfitters, working across UI architecture, REST integrations, and legacy modernization.
- Worked directly with client teams on requirements, UI decisions, technical trade-offs, and iterative delivery across several concurrent projects.

Tech: JavaScript, AngularJS, React, Node.js, Java, Spring, REST, AWS, D3, Alfresco, Hybris

Software Developer

Multi-channel financial services platform spanning web, Android, and mobile-web experiences.

- Built client-side modules and integrated SOAP web services for transaction workflows used by operators, retailers, and financial institutions.
- Worked within a Java/Spring platform with structured delivery, code quality checks, and cross-channel requirements.

Tech: JavaScript, jQuery, Java, Spring, JSP, SOAP, Maven, TestNG

Software Developer

Java web engineering and production support for Oracle ATG-based commerce portals.

- Maintained and supported production web portals while building practical experience across Java web technologies and enterprise commerce systems.
- Completed the EPAM Java Laboratory with hands-on work across Spring, persistence, web frameworks, testing, and relational databases.

Tech: Java, Spring, Oracle ATG, JSP, Servlets, Hibernate, JPA, Oracle DB, MySQL, JUnit

EDUCATION

Belarusian State University of Informatics and Radioelectronics - Minsk, Belarus

Specialist Degree in Systems Engineering, Faculty of Computer Systems and Networks | 2008 - 2013
